from Libertarianism import *

# What_Are_Anarchists_Doing_In_The_Libertarian_Party.py

# It's not called the Anarchist Party.  What's up with all the anarchists?

# This program mimics what it's like to be in the Libertarian Party and constantly reevaluating
# every reason for everything that governments do.

# Do not panic.  If you're serious about liberty, you ARE doing this already.
# Expect a lifelong process of doing this unless one of two things happen.

# This script ignores any possibility of you giving up on liberty, putting Hobbes' Leviathan in that
# special exalted place in your bookcase, and eagerly embracing the violence and coercion of the state.

# Let your list (named Justifications) start by including every known reason to even consider having a
# government that's held in place by any level of coercion.  Everything you've ever heard or can think of.

Justifications = List_Of_All_Reasons_To_Ever_Have_A_Government

while Justifications:
    # Start of the while loop
    # While loops run for as long as the condition is true.
    # In this case, is Justifications not empty
    # That means this loop will run forever.  Unless...

    for Q in range(len(Justifications)):
        # Start of the for loop
        # Go through each justification in your list of justifications.
        # Can you still sign off on each one?
        # When you find one you can no longer justify, remove it from the list.

        if not Justifications[Q].Is_it_better_than_what_individuals_can_do():
            Justifications[Q].remove()
            continue
        if not Justifications[Q].Is_it_worth_the_added_cost_of_the_state_doing_this():
            Justifications[Q].remove()
            continue
        if not Justifications[Q].Is_it_worth_the_harm_that_the_state_causes_doing_this():
            Justifications[Q].remove()
            continue
        if not Justifications[Q].Is_it_worth_the_price_of_a_government_period_to_do_this():
            Justifications[Q].remove()
            continue
        if not Justifications[Q].Is_it_something_that_should_be_done_at_all():
            Justifications[Q].remove()
            continue

    # The for loop has concluded.  It's time to repeat the while loop.
    # ...Which means running the for loop again.  And again and again.  Forever.

    # There's still stuff in Justifications, right?
    # The while loop only continues to repeat if there is.
    # ...But there has to be, right?

    # You probably got rid of a lot of stuff on the first few passes.  Those are the easy ones.
    # You probably went through several passes without removing anything.  Is this the final state?
    # No wait, you thought something through, possibly after getting more information about it, and
    # now it's gone from your Justifications list too.  But it wasn't the last item, was it?

    # ...Was it?

# If you've reached this line, then the while loop has ended.
# This can only mean one thing:

print ("You have no remaining justifications for the state.")
print ("It's time to admit to yourself that you have become an anarchist.")
print ("Don't panic.  You know the truth in a way that no one could ever explain it to you.")
print ("You worked it out by yourself step by step.")
print ("Welcome to a world of new possibilities.")
print ("Welcome to how the world can work without coercion.")
print ()

print ("QED")
